#MakeThingsLast

In Scotland we waste

**1.4 MILLION
TONNES**

of food waste
**each
year**

The fight for the world's food

Population is growing. Supply is falling. Prices are rising. What will be the cost to the planet's poorest?

By David Huxford

Most people in Britain will not have noticed. But the impact of rising food prices is being felt in the pockets of the world's poorest. In many parts of the world, the cost of food has risen by as much as 100% in the last year. In short, we may be reaching the end of cheap food.

The shock of us who have grown up in post-war Britain is that prices have risen only 10% since then. In 2007, the average British household spent an average of £100 on food. Today, that figure has dropped to 80%.

But for the 1 billion people in the world's poorest countries, the cost of food has risen by as much as 100% in the last year. In short, we may be reaching the end of cheap food.

£1 Billion

Food Waste

A large industrial smokestack is shown at the bottom center, emitting a thick, billowing plume of white smoke that rises and spreads across the sky. The smoke is dense and textured, with some darker shadows within the clouds. The background is a pale, overcast sky with soft, diffused light. The overall scene conveys a sense of industrial activity and environmental impact.

11 million tonnes
CO²

Cutting food waste

would save

£500 million by 2025

Food waste matters

1.3 BILLION
of food waste are
produced globally
every year

This is an
average of **186** KG
per year
per person

Population levels are rising rapidly

If we cut food waste we can feed more people.

Scotland is leading the way. We're the first in the EU to set a food waste reduction target. We want to cut food waste by a third by 2025.

I'M PERFECT

Every year we throw out enough food to fill the Royal Albert Hall 30 times!

Don't judge a carrot by its looks, judge it by the chef.

**Not perfect looking,
still perfectly tasty**

Thank you.
