Introduction	5
Part 1. Plastic Waste in C&D Waste - General Context	9
1. Quantitative and qualitative aspects of plastic waste in C&D waste	10
1.1. What is C&D waste?	10
1.2. C&D waste produced and recycled in Europe	11
1.3. How significant is the use of plastics in the building and construction sector?	11
1.4. What types of plastic are used in the construction sector, and in which applications?	12
1.4.1. Polymers	12
1.4.2. Products used in the construction sector.....	13
1.5. Plastics waste arising in C&D sector.....	14
2. Plastic C&D waste: what is the environmental challenge?	
What are the difficulties?	15
3. What is plastics recycling?	16
3.1. Post-producer vs. post-consumer recycling	16
3.2. Methods for recycling	17
4. Description of the sectors: C&D sector, plastic industry, recycling sector	19
4.1. The construction sector in Europe	19
4.2. The plastics industry in Europe	19
4.3. The recycling sector in Europe	19
Part 2. Management of plastic waste in C&D waste in Europe	21
1. Legal and political framework at European level	22
1.1. European legislation and policy	22
1.2. Waste treatment policies	23
1.3. Product-related policies	23
1.4. Voluntary commitment on PVC waste: Vinyl 2010	24
2. Strategies and practical experiences in Europe	24
2.1. Germany	24
2.1.1. Legal instruments in Germany	25
2.1.2. Financial instruments in Germany	26
2.1.3. Other measures	26
2.1.4. Voluntary agreements in Germany	26
2.1.5. Initiatives for plastic C&D waste collection in Germany	27
2.1.6. Collection and recycling systems for specific flows	27
Case 1: Collection system for windows	27
Case 2: Collection system for roofing membranes	28
Case 3: Collection system for flooring	29
Case 4: Collection system for pipes	29
Case 5: Collection system for coated fabrics	30
Case 6: Collection system for cables	30

2.1.7.	Conclusion	30
2.2.	Austria	31
2.2.1.	Legal instruments in Austria	31
2.2.2.	Financial instruments in Austria	31
2.2.3.	Voluntary agreements in Austria	31
2.2.4.	Initiatives for plastic C&D waste recycling in Austria.....	32
	Case 1: Collection system for pipes.....	32
	Case 2: Collection system for flooring.....	32
2.3.	Denmark	33
2.3.1.	Legal instruments in Denmark	33
2.3.2.	Financial instruments in Denmark	33
2.3.3.	Voluntary agreements and initiatives in Denmark on C&D waste	34
2.3.4.	Plastic waste management in the C&D sector in Denmark.....	34
2.4.	The Netherlands.....	36
2.4.1.	Legal instruments in The Netherlands.....	36
2.4.2.	Financial instruments in The Netherlands	37
2.4.3.	Positive C&D waste planning measures	37
2.4.4.	Voluntary agreements in The Netherlands	37
2.4.5.	Plastic C&D waste in the Netherlands	37
	Case 1: Collection system for pipes.....	38
	Case 2: Collection system for windows.....	39
	Case 3: Collection system for insulation materials.....	40
Part 3.	Pilot projects at local and regional level - the APPRICOD project	41
1.	Introduction	42
2.	Description of scenarios and implementation of the pilot project:	42
2.1.	Brussels-Capital Region	42
2.1.1.	Local context	42
2.1.2.	Methodology for selection of scenarios	43
2.1.3.	Costs.....	43
2.1.4.	Conclusions	43
2.2.	Catalonia	44
2.2.1.	Local context	44
2.2.2.	Methodology	44
2.2.3.	Costs.....	45
2.2.4.	Conclusions	45
2.3.	Porto	46
2.3.1.	Local context	46
2.3.2.	Methodology for selection of scenarios	46
2.3.3.	Implementation of the selective collection scenarios.....	47
2.3.4.	Costs.....	47
2.3.5.	Conclusions	47

2.4.	Province of Ancona	48
2.4.1.	Local context	48
2.4.2.	Methodology for selection of scenarios	48
2.4.3.	Costs	48
2.4.4.	Conclusions	48
3.	Results and conclusions from the pilot projects	49
 Part 4. Recommendations and good practices		51
1.	Recommendations to public authorities for sustainable plastic C&D waste management	52
1.1.	General recommendations	52
1.2.	Regulatory instruments	53
1.3.	Economic, financial and fiscal instruments	53
1.4.	Technical aspects to bear in mind	54
1.5.	Communication instruments	54
1.6.	Specific tools for local and regional authorities	54
2.	Good practices for the C&D sector	55
2.1.	Rationale for sustainable plastic C&D waste management	55
2.2.	Recommendations	56
2.2.1.	On the level of the general contractor or the building site	56
2.2.2.	On the level of the specific building professions and plastic waste streams	57
2.2.3.	On the level of the building federations or the building sector in general	57
 Conclusions		59
 Annexes and bibliography		63
Annexe 1 : List of plastic elements used in the construction sector		64
Annexe 2 : APPRICOD partners contact list		69
Bibliography		70
